Subject Index to Volume 9

A

Adaptive
- clustering, 515–522
- control, 1–16, 515–522
- prediction, 515–522

AI
- applications, 691–700
- software, 429–437

Analogy, 601–609
Application-specific array processor architectures, 43–52
Applications, 413–421
Apprenticeship learning, 611–626
Artificial
- intelligence, 403–411
- neural networks, 83–93

Automatic design, 17–31
Autonomous
- calibration, 83–93
- systems, 43–52

B

Backpropagation, 129–136, 309–319
Backward chaining, 185–194
Beam-column joints, 309–319
Beams, 309–319
Behavior, 439–451
Blackout restoration, 195–203
Book Reviews, 97–98, 209–210, 331–333, 465–466, 575
Browsing, 561–574
Bus-bar switching, 195–203

C

CAD, 439–451
Cascade-correlation, 75–81
Case simulations, 285–300
Case-based
- design, 385–391
- reasoning, 163–173, 377–384, 385–391, 533–540

Cell assemblies, 145–151
Characteristics recognition, 671–679
Circular tiered illumination system, 655–669
Civil engineering, 589–599
Classification, 205–208, 589–599, 639–644
Co-occurrence measures, 75–81
Computational models, 349–357
Computer engineering, 611–626
Computer-aided
- design, 17–31, 413–421
- design analysis, 423–427
- manufacturing, 413–421

Conceptual design, 17–31, 359–376
Configuration problems, 611–626
Consistency, 487–498
Constraint-based design, 393–402
Constraint-satisfaction problems, 261–273
Construction algorithms, 1–16
Contract nets, 453–461
Controller tuning, 65–74
Convergence and stability, 1–16
Cooperation, 453–461
Coordination, 453–461
Correlation coefficients, 301–308
Cross entropy function, 205–208

C

CAD, 439–451
Cascade-correlation, 75–81
Case simulations, 285–300
Case-based
- design, 385–391
- reasoning, 163–173, 377–384, 385–391, 533–540

Cell assemblies, 145–151
Characteristics recognition, 671–679
Circular tiered illumination system, 655–669
Civil engineering, 589–599
Classification, 205–208, 589–599, 639–644
Co-occurrence measures, 75–81
Computational models, 349–357
Computer engineering, 611–626
Computer-aided
- design, 17–31, 413–421
- design analysis, 423–427
- manufacturing, 413–421

Conceptual design, 17–31, 359–376
Configuration problems, 611–626
Consistency, 487–498
Constraint-based design, 393–402
Constraint-satisfaction problems, 261–273
Construction algorithms, 1–16
Contract nets, 453–461
Controller tuning, 65–74
Convergence and stability, 1–16
Cooperation, 453–461
Coordination, 453–461
Correlation coefficients, 301–308
Cross entropy function, 205–208

D

3D reconstruction, 53–64
Data dictionaries, 33–41
Database
  manipulation, 561–574
  mining, 691–700
  query processing, 691–700
Decision
  structures, 33–41
  trees, 129–136
Dedicated fixture, 533–540
Design, 219–229, 453–461
Design
  automation, 17–31
  optimization, 393–402
  synthesis, 17–31
Diagnosis, 285–300
Distributed image representation, 43–52
Document
  analysis and recognition, 53–64
  retrieval, 551–560
Documentation, 561–574

E

Empirical error rates, 627–637
Engineering
  design, 601–609, 611–626
  drawings understanding, 53–64
Environmental
  engineering, 589–599
  impact assessment, 589–599
Erratum, 463
Evaluation, 439–451, 589–599
Expert systems, 153–161, 195–203, 321–329
Extraction of comprehensive symbolic rules, 137–143

F

Failure mode and effects analysis, 219–229
Fault diagnosis, 163–173, 487–498
Feature analysis, 671–679
Feedforward neural networks, 109–119
Fixture design, 533–540
Functional model, 219–229
Fuzzy
  control, 65–74, 515–522
  logic, 175–184, 551–560
  neural networks, 551–560
  reasoning, 153–161, 475–485
  systems, 515–522

G

Gain margin, 65–74
General operating procedures, 321–329
Generalization, 137–143, 145–151
Generic accuracy model, 83–93
Genetic algorithms, 175–184, 393–402, 403–411, 523–532, 681–689
Graphical user-interfaces, 691–700
Guidance relations, 589–599

H

Harmony theory, 487–498
Helicopter flight control, 175–184
Heuristic rules, 475–485
Heuristics, 275–284

Hierarchical planning, 453–461
Higher-order networks, 83–93
Hippocampus, 145–151
Hydraulic circuitry design, 499 -514

I

Image segmentation, 75–81
Indexing, 601–609
Inference networks, 245–259
Information retrieval, 551–560
Injection
    mold design, 359–376
    molding part development, 359–376
Ink-jet printers, 163–173
Intelligent
    computer-aided design (ICAD) system, 499–514
    design assistants, 611–626
Inverse compensation, 83–93

K

KAUS, 349–357
Kinematics, 541–549
Knowledge
    based front end, 245–259
    bases, 33–41, 321–329
    discovery, 645–653
    discovery systems, 691–700
    usage, 393–402
Knowledge-based
    simulation, 261–273
    systems, 163–173, 275–284, 285–300, 359–376, 671–679

L

Language analysis (LA), 561–574
Learning, 145–151, 285–300
Learning
    assessment, 285–300
    curves and envelopes, 627–637
    design rules, 627–637
    from examples, 137–143
Linguistic variables, 33–41
LISP, 245–259
Load-deflection, 309–319
Logic programming (LP), 561–574
Logical distances, 33–41

M

Mean-squared error, 205–208
Mechanical draft cooling towers, 185–194
Mechanism design, 17–31
Memory, 145–151
Message from the Editor-in-Chief, 345
Methodology, 377–384
Metrics, 561–574
Minimization, 205–208
Minimum description length, 639–644
Mobile robot, 475–485
Model-based learning, 601–609
Modelling, 681–689
Moment-curvature, 309–319
Multi-layered logic, 349–357
Multicriteria optimization, 403–411
Multistrategy learning, 611–626

N

Natural draft cooling towers, 185–194
Network conditioning, 1–16
Neural networks, 121–127, 129–136, 145–151, 153–161, 205–208, 301–308, 309–319, 413–421, 487–498, 551–560, 655–669, 681–689
Neural-network
  architecture, 75–81
  interpretation, 137–143
Neurofuzzy modelling and control, 1–16
Nonlinear
  control, 231–243
  dilation networks, 301–308
  identification, 231–243

O

Object-oriented
  models, 499–514
  process representation, 385–391
Objective functions, 205–208
Obstacle avoidance, 475–485
Occupancy arrays, 541–549
Optimisation, 681–689
Orthographic views, 53–64

P

Parallel image processing, 43–52
Parametric nets, 109–119
Pareto sets, 403–411
Partial global planning, 453–461
Pattern
  classification, 487–498
  recognition, 121–127
Performance comparison of learning systems, 627–637
Phase margin, 65–74
Physical devices, 601–609
PI control, 65–74
Placement problems, 261–273
Plastic material selection, 359–376
Plausible version space, 611–626
Preface, 107, 347–348, 587–588
Printed-circuit board, 655–669
Prior knowledge, 589–599
Probability
  distribution, 487–498
  estimation, 205–208
Process monitoring, 671–679
Processor arrays, 43–52
Product concept evaluation, 359–376
Production process, 681–689 PWR, 321–329

Q

Qualitative reasoning, 423–427
Quality assurance, 219–229

R

Reaction-based control, 475–485
Recurrent neural networks, 231–243
Reinforcement, 309–319
Reply to Author's Reply, 95–96
Resource allocation, 261–273
Reuse, 413–421
Reuse of solutions, 377–384
Reverse engineering (RE), 561–574

Robot calibration, 83–93
Rough sets, 645–653
Rule induction, 589–599
Rule-based systems, 185–194

S

Scheduling, 261–273
Selective and constructive induction, 627–637
Serial correlation as inductive bias, 639–644
Simulated annealing, 393–402, 523–532
SME, 439–451
Sneak circuit analysis, 423–427
Soft computing, 109–119
Software
  engineering, 429–437
  interfaces, 153–161
  metrics, 153–161
  quality, 429–437
  testing, 275–284
Solder-joint inspection, 655–669
Spatial reasoning, 541–549
Statistics, 205–208
Strategic knowledge, 349–357
Structural, 309–319
Structural
  engineering, 627–637
  similarity, 385–391
Supervised
  Bayesian learning, 639–644
  learning, 75–81
Surface-mounting technology, 655–669
Switching sensitivity, 195–203
System
  analysis, 219–229
  identification, 515–522, 523–532
  modeling, 515–522
Systems' review, 377–384

T

Taxonomies, 219–229
Textiles, 681–689
Texture boundary detection, 75–81
Threshold logic units, 129–136
Time series sensor data, 639–644
Training noise, 121–127

U

Uncertainty, 475–485

V

Validation and verification (V&V), 275–284
VIDHI, 185–194
Virtual product model, 439–451

W

Water demand prediction, 645–653
Wiener model, 231–243
